

SDS Lumber LLC.
Planer Pull Chain Operator Job Safety Analysis (**JSA**)

Job Title: **Planer Pull Chain Operator**
Department: Planer
Shift(s): Day

Date Prepared: 11/26/25
Revision Date: 11/26/25
Name:

GENERAL JOB DESCRIPTION

The Pull Chain Operator pulls and stacks finished lumber (no more than 4 boards at a time) from a moving pull chain onto rolling lumber carts using grade stamp and length as a guide. Operator regulates the flow and can start/stop the chain. Broken or undesired wood must be pulled into the chip bin. All loads must be squared and look presentable to customers. Kiln sticks and bunks are automatically collected from the planer infeed line to the secondary line for sorting and reuse. This position is also responsible for assisting with the forklift as needed, and filling lath magazines at the stacker. This is a rotating position, training in other jobs will be required as directed by your supervisor. Operators must make sure that the chain stays on, and the lumber is moving. If a plug-up were to occur, the operator will follow the proper procedure to remove the plug-up in a safe and timely manner.

EXPERIENCE OR TRAINING REQUIRED

To effectively perform the duties of this job, the employee must be familiar with the different lumber species and be able to read a tape measure to ensure that lumber is being sorted properly. A basic understanding of mechanical drives and energy isolation procedures is necessary. Requires knowledge or experience in lumber operations that provides sound knowledge of mechanical drives, lumber sizes, characteristics by species.
